ONLINE BIRTH CERTIFICATE

Online Birth Certificate System maintains a good record of date of birth of people. This system helps admin to view data of date of birth of people who reside in country. The main objective of "Online Birth Certificate System" project is to providing easier registration of date of birth and gets certificate of birth online which save lots of time.

Births registration plays a very important role in planning of various government schemes. All the important information like place of birth date, place of birth and vital particular at the time of Births are required in various places so this project helps to maintain all these records at one place which is useful for government as well as people.

The purpose of developing Online Birth certificate system is to computerized the tradition way of birth registration. Another purpose for developing this application is to generate the report automatically.

In Online Birth Certificate System, we use PHP and MySQL Database

ABSTRACT

Pharmacy Management System application to help pharmacist to manage pharmacy in the systematic ways. Pharmacy Management System can make the work easier by giving the details of medicine when its name is entered. A computer gives the details of the medicine like rate of medicine, and expiry date of medicine. It becomes very difficult in big medical stores to handle the details of all the medicine manually, so by using this pharmacy management system. We can maintain the records of all the medicines. It is fed with the information whenever new medicine are brought and it is provided with expire date with search option. When we enter the name of medicine it gives the details of medicine.

The technology platform in implementing this system uses visual studio programming environment with C# and Xamap using MYSQL for SQL database.
